

## **AEA COMPUTER PATCH™ INTERFACE MODEL CP-1**

Congratulations on your decision to purchase the AEA Computer Patch™ interface. This equipment was designed to broaden the scope and use of the radio amateur's home computer.

### **DESCRIPTION**

The AEA Computer Patch (CP-1) provides the electronics necessary to connect a personal computer such as the Commodore, Apple, Radio Shack, etc. to your amateur station. The CP-1 uses your receiver audio teletype or CW signals to generate TTL or RS-232 signals for your computer and it generates microphone level AFSK signals for teletype transmissions. For CW transmissions, positive and negative keying lines are provided. A send-receive line for the transmitter push to talk (PTT) circuits is included for automatic transmit-receive.

Specific applications software packages for the CP-1 are available for many of the popular personal computers on the market. Contact your dealer for information regarding software for your particular computer.

**Optional MBATEXT™ Software Package (for Comm-64)**
